LAUNCH INFORMATION

\bigcirc

LAUNCH SITE

Launch Complex 1 – Pad B Mahia, New Zealand.

DAILY LAUNCH WINDOW OPENS

Rocket Lab is targeting no earlier than December 13, 2023 UTC with a two hour daily window.

Time Zone	Window Open
NZDT	17:00 – 19:00, Nov. 28, 2023
UTC	04:00 – 06:00, Nov. 28, 2023
EST	00:00 – 02:00, Nov. 27, 2023
PDT	21:00 – 23:00, Nov. 27, 2023

Back up opportunities are available throughout December.

MISSION OVERVIEW

About 'The Moon God Awakens'

Rocket Lab will launch the TSUKUYOMI-I syntheticaperture radar (SAR) satellite for Japan-based Earth imaging company the Institute for Q-shu Pioneers of Space, Inc. (iQPS).

'The Moon God Awakens' is scheduled to launch from Pad B at Launch Complex 1 in Mahia, New Zealand, and will carry a single satellite for iQPS.

Named after the Japanese God of the Moon, the QPS-SAR-5 satellite "TSUKUYOMI-I" is a synthetic-aperture radar satellite that will collect high-resolution images of Earth. The satellite will join another iQPS satellite in orbit that will ultimately be a 36-satellite constellation capable of monitoring Earth at speci ic ixed points every 10 minutes.

The mission will be Rocket Lab's 10th launch of 2023, exceeding our previous annual launch record of nine. 'The Moon God Awakens' will be Rocket Lab's 42nd Electron launch overall.

LAUNCH SITE OVERVIEW

Rocket Lab Launch Complex-1 Mahia, New Zealand

'The Moon God Awakens' will lift off from Launch Complex 1, Pad B on New Zealand's Mahia Peninsula.

An FAA-licensed spaceport, Launch Complex 1 can provide up to 120 launch opportunities every year. From the site it is possible to reach orbital inclinations from sun-synchronous through to 30 degrees, enabling a wide spectrum of inclinations to service the majority of the satellite industry's missions to low Earth orbit.

Located within Launch Complex 1 are Rocket Lab's private range control facilities, two 100K satellite cleanrooms, a launch vehicle assembly facility which can process multiple Electrons at once, and administrative offices.

Operating a private orbital launch site alongside its own range and mission control centres allows Rocket Lab to reduce the overhead costs per mission, resulting in a costeffective launch service for satellite operators.

In addition to Launch Complex 1, Rocket Lab operates an additional launch site, Launch Complex 2, at the Mid-Atlantic Regional Spaceport within NASA's Wallops Flight Facility on Virginia's Eastern Shore. Launch Complex 2 can support up to 12 missions per year.

By operating two launch complexes in two hemispheres, Rocket Lab provides customers with flexible, responsive launch opportunities.

TIMELINE OF LAUNCH EVENTS

ELECTRON LAUNCH VEHICLE

OVERALL

LENGTH 18m

DIAMETER (MAX) 1.2m

STAGES 2 + Kick Stage

VEHICLE MASS (LIFT-OFF) 13,000kg

MATERIAL/STRUCTURE Carbon Fiber Composite/Monocoque

PROPELLANT LOX/Kerosene

PAYLOAD

NOMINAL PAYLOAD 320kg / 440lbm To 500km

FAIRING DIAMETER 1.2m

FAIRING HEIGHT 2.5m

FAIRING SEP SYSTEM Pneumatic Unlocking, Springs

STAGE 2

PROPULSION 1x Rutherford Vacuum Engine

THRUST 5800 LBF Vacuum

ISP 343 Sec

INTERSTAGE

SEPARATION SYSTEM Pneumatic Pusher

STAGE 1

PROPULSION 9x Rutherford Sea Level Engines

THRUST 5600 LBF Sea Level (Per Engine)

ISP 311 Sec
